

Submission Guidelines

For this practical, you must create a new and separate GitHub or GitLab repository. Do not use the repository that you created for Practical 1.

Repository Requirements

1. Create a new repository on GitHub or GitLab.
2. Name the repository: [Student ID]-ResponsiveLayout2
3. Set the repository visibility/access to **public**.
 - The repository must be public so that the teacher can access and assess your work.
 - Do not make the repository **private**.
4. Push your completed Android Studio project to the repository.
5. Make sure the repository contains the required project files, including:
 - The original layout selected from Practical 1.
 - The **layout-land** alternative layout.
 - The smallest width (**layout-sw<N>dp**) or available width (**layout-w<N>dp**) alternative layout.
 - All other required Android Studio project files.
6. Your repository must contain at least three commits .
 - Each commit must have an informative and descriptive commit message that clearly indicates what was changed.
 - Avoid vague messages such as `update`, `changes`, `test`, or `final`.
 - For example:
 - `Create initial responsive layout`
 - `Add landscape layout for wider screens`
 - `Add sw600dp alternative layout`
 - The commits should demonstrate the development progress of your practical rather than having all work submitted in a single commit.

Canvas Submission

The URL of your GitHub/GitLab repository is your submission for this practical.

1. Copy the URL of your **public** GitHub/GitLab repository.
2. Submit the repository URL through Canvas.
3. No separate project-file upload is required unless otherwise instructed.

Before Submitting

Make sure that:

- A new repository was created separately from Practical 1.
- The repository name follows [Student ID]-ResponsiveLayout2.
- The repository is **public**.
- The completed Android Studio project has been pushed to the repository.
- The original Practical 1 layout has been included.
- A **layout-land** layout has been implemented.
- A smallest width or available width layout has been implemented.
- The project has been tested using the appropriate virtual device(s).
- The repository contains at least three commits.
- Each commit has an informative/descriptive commit message.
- The latest changes have been committed and pushed.
- The correct repository URL has been submitted through Canvas.

Remember: The repository must be **public**, contain at least three meaningful commits, and include descriptive commit messages so that the teacher can access and assess both your completed work and your development progress.
